

Protect Yourself and Others

The best way to prevent meningococcal disease is to get vaccinated. Two separate meningitis vaccines are necessary to be fully immunized against the disease: MenACWY and MenB.

Meningococcal disease strain B is the most common cause of bacterial meningitis on college campuses. Despite this, few people have received the MenB vaccine. **Make sure you have BOTH meningitis vaccines to fully protect yourself and those around you.**

For additional information, please visit meningitisprevention.org.

Next Steps

If you are not sure that you are up to date on your meningitis vaccines, please call Health Services at (229) 333-5886. A member of our team will be happy to assist you in reviewing your immunization records.
